

# BALLOON MESSENGER

See your message growing before your eyes

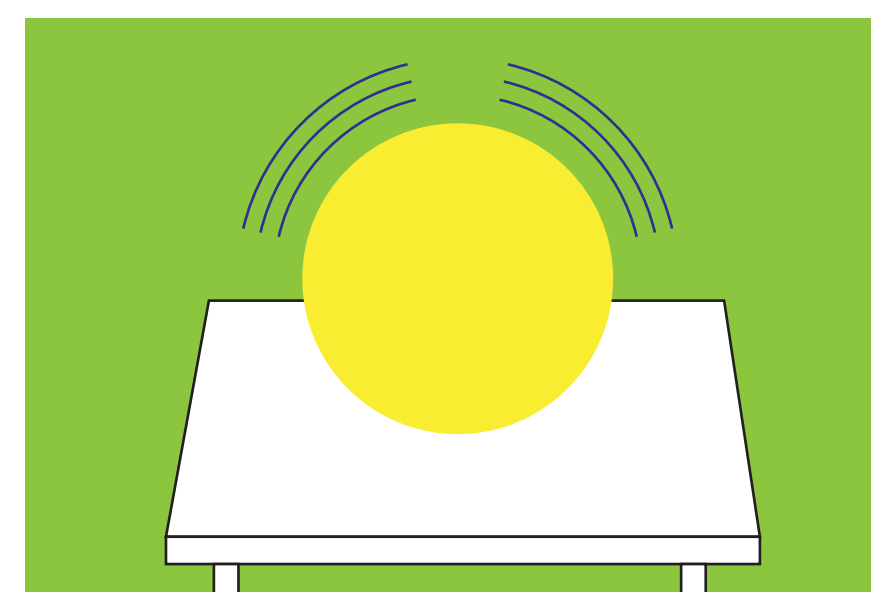

Balloon Messenger is a voice recorder that changes the size of the balloon during your voice recording. You can see the expansion of the Balloon Messenger as you record your message. This action is analogous to blowing up a balloon.

Metamorphosis in various sizes and colors

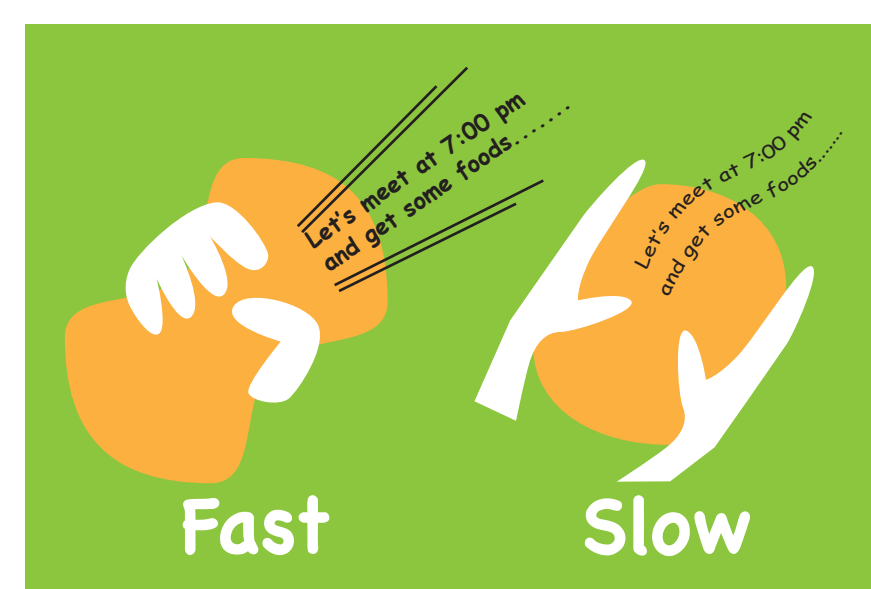

Your message changes the size and color of the Balloon Messenger. The size of the balloon is related to the length of your message. Your interaction with the Balloon Messenger also causes unique changes of color for the balloon.

It will try to catch your attention!

When nobody plays the message for a certain period of time, the Balloon Messenger will attempt to catch people's attention.

The speed of playback at your finger tips

You can vary the playback speed of the message by squeezing it with different intensity. For example, if you squeeze harder, the message plays back faster. As the message is played out, the balloon deflates itself. The message is played only once as the Balloon Messenger is about capturing a precious moment in time that cannot be repeated.
